                                                      disorders. Nucleotides encoding K+Hnov proteins may be used for identifying homologous or related proteins at the DNA sequences encoding them. They may be used to produce compositions that modulate the expression and function of the K+Hnov protein and in studying the biochemical pathways associated with it. They may also be used for the recombinant production of K+Hnov protein in the protein cultures.
                                                                                                                                             polymorphisms detected as sequence variants by ween multiple independent clones. Potassium channels have controlled in various cell types and biochemical pathways. Defective potassium channels are known to cause four human diseases: episodic a axia with myokymia; cardiac arrhythmia (long OT syndrome); epilepsy; and Bartter's syndrome. As potassium channels are critical componer. If virtually all cells, it is likely that abnormal potassium channers are also implicated in certain renal, cardiovascular and central nervous system (CNS)
                                                                                                                                                                                                                                                                      K+Hnov proteins have a high degree of homolary channels and may be alpha subunits, which for or accessory subunits that act to modulate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acids encoding mammalian K+Hnov (...ussium channel proteins, useful for the diagnosis and tree; (...t of episodic with myokymia, cardiac arrhythmia, epilepsy (...)                     polynucleotide AAZ00039. h-TREK1 is a two pore potassium channel, and the gene maps to human chromosome 1932, between the markers D1S237 and WI5105. The polynucleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative diseases including Alzheimer's,

English.

The present sequence is human TREKI (h-TREK) the large a member of the 2P domain potassium channel family of prote. which play a part in the control of resting membrane potential. Moduly on of these channels will therefore affect neuronal excitability, the leading to a modulation

The present sequence is human h-TRAAK protein #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Functional genomics was used to identify h-TRAAK polypeptides and h-TRAAK polynucleotides from human tissue samples. h-TRAAK polypeptides have homology to the 2P domain potassium channel family of polypeptides. The h-TRAAK polypeptides and polynucleotides may be used in diagnostic assays for conditions related to h-TRAAK imbalance and for identifying agonists and antagonists of h-TRAAK polypeptides. The h-TRAAK polypeptides and polynucleotides may also be useful for treatment and prevention (e.g. as vaccines) of certain diseases, such as pain, psychiatric disorders including depression and chiscabers, such as pain, psychiatric disorders including depression and

The protein protein designated TRAAK. The protein is uncluded by polyunsaturated fatty acids, particularly a protein is used to screen for which can be protein is used to screen for which heart and nervo systems in humans and animals, e.g. epileps which heart and nervo systems in humans and animals, e.g. epileps which heart and nervo systems in humans and animals, e.g. epileps which heart and nervo disease (arrhythmia), neurodegeneration (particular) which associated with ischemia or anoxia), abnormalities of hormo these diseases. The protein itself may be used to these diseases. Antibodies specific for the protein are used to these diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 2; Fig 1; 40pp; French

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BIOL Chem. 275:16969-16978(2000).

- FUNCTION: PH-DEPENDENT, VOLTAGE-INSENSITIVE, BACKGROUND POTASSIT CHANNEL PROTEIN. RECTIFICATION DIRECTION RESULTS FROM POTASSIUM ION CONCENTRATION ON EITHER SIDE OF THE MEMBRANE, ACTS AS AN OUTWARD RECTIFIER WHEN EXTERNAL POTASSIUM CONCENTRATION IS LOW.

WHEN EXTERNAL POTASSIUM CONCENTRATION IS HIGH, CURRENT IS INWARN
                                                                                                                                                                                                                                                                                                                                                        SUBUNIT: HOMODIMER (POTENTIAL).

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (POTENTIAL).

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (POTENTIAL).

TISSUE SPECIFICITY: VERY STRONG EXPRESSION IN HEART, ALSO DETECTED IN KIDNEY, BRALN, SKIN, TESTIS, LUNG, SKELETAL MUSCLE, SMALL INTESTINE AND STOMACH. NOT DETECTED IN LIVER, THYMUS OR SPLEEN.

MISCELLANBOUS: INACTIVATED BY BARIUM.

SIMILARITY: BELONGS TO THE TWO PORE DOMAIN FAMILY OF POTASSIUM CHANNELS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        musculus (Mouse)
